

## Centrifugal Vegetable Drying Machine, Model: LS-ES

<https://www.jegerings.com/en/>

## Advantages

- The LS-ES is a stainless steel centrifugal dryer to remove washing water. This high quality and stable machine is perfectly suited for industrial use and ideal for leafy vegetables and small amounts of heavy vegetables.
- Operating principle: washed vegetables flow from the washing machine into special plastic baskets. The basket is placed in a special basket holder in the drying machine. After closing the lid the machine automatically starts and will run at the ideal speed of 550 RPM. This speed ensures that only the washing water get removed while the product juices are maintained in and the product does not get damaged.
- After opening the lid, the machine stops immediately (break motor) and the basket can be taken out of the machine. Optionally, an electronic timer can be installed to stop the machine after a pre-set time.
- The LS-ES stands on four heavy levellers with vibration dampers are mounted, absorbing vibrations and keeping the machine in its place. Therefore it is not necessary to fix the machine on the floor.

## Technical data and dimensional diagram

**Dimensions:** WxDxH = 580 x 740 x 855 mm, deployment altitude = 830 mm

**Electrical data:** 1 Ph / 230 V / 3.6 A / 2800 RPM, basket holder 550 RPM

**Machine weight:** 125 kg

## Prices

<b>Type LS-ES:</b>	on request
• Surcharge extra blue plastic drying baskets:	on request
• Surcharge dense basket inserts (for small cut vegetables):	on request
• Surcharge timer:	on request

**Delivery time:** stock – 2 weeks

**Delivery:** ex. works Deurne – the Netherlands. Packaging and transportation excluded.

**Warranty:** 1 year. Outside the Netherlands only on spare parts.
